DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11-21 and 34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Minagawa et al.

The reference discloses a polymeric composition comprising reactions of a 2-ortho alkylhydroxybenzylpropane-diol with a phosphorylating agent(see col. 20, lines 13 et seq.) such as phosphorus trichloride (see col. 19, lines 45 et seq.) under cited conditions (see col. 25, lines 62 onto col. 32).

Note that the propanediols comprising at least one ortho-alkylhydroxybenzyl group at the 2-position of the 1,3-propanediol structure and a second ortho-alkylhydroxybenzyl group can also be present at the same 2-position (see col. 10, lines 32-45).

Since said diols contains an aromatic group (a benzyl radical) and a diol, then said diols can be read on the claimed aromatic diol. Further, said diols also contains an aromatic group (a benzyl radical) a diol group (two hydroxy radical) and another hydroxyl group (hydroxybenzyl group), the another diols can be considered as aromatic polyhydric alcohol, as in the claims.

The disclosure of the reference differs from the instant claims in that it does not disclose two specific reactants: an aromatic polyhydric alcohol and an aromatic diol to combine with a phosphorus trichloride.

However, said aromatic polyhydric alcohol and said aromatic diol are included in the broad teachings of the reference, as stated above, of the broad ortho-alkylhydroxybenzylpropane diol of the reference with different alkyl groups then it would have been obvious to one of ordinary skill in the art to select the aromatic polyhydric alcohol and the aromatic diol from the reference within the limitations of the instant claims to form the same products in the absence of a showing of unexpected results derived from said selections.
